

## WS-1

### UTILITY CHEST

An economical Chest ideally suited for extra protection in a fireproof safe. The standard unit is equipped with the 6730 key changing combination lock, capable of one million possible combination changes.

The locking mechanism is the same design found on our Underwriters approved burglary resistive safes. The boltwork is handle activated and consists of two "dovetailed" locking bolts, that lock the door top and bottom. The door is equipped with a relocking device, that deadlocks the locking bolts in a locked position if the lock is attacked.

### BODY CONSTRUCTION

The sides, back, top and bottom are 1/4 inch solid steel plate, electrically welded at all seams. The door and front are 1/2 inch solid steel plate.

## WS-10 — WS-10 3D

A sturdy large capacity chest ideally suited for cash trays, rolled coin storage and many other uses, when adding the two compartment interior. Interior compartment doors are equipped with dual control key locks for armored car control.

The standard unit is equipped with combination lock on outer door. Standard inner compartment doors are equipped with dual control key locks.

One compartment has 4½" x ½" deposit slot.

The outer door is equipped with A&B patented dual dovetail locking mechanism, that locks the door top and bottom.

The body is constructed of ¼" solid steel plate and the door and front is ½" solid steel plate. There are two holes in bottom plate for anchoring.
