EMPIRE SECURITY SAFES

IDEAL FOR STORAGE OF:

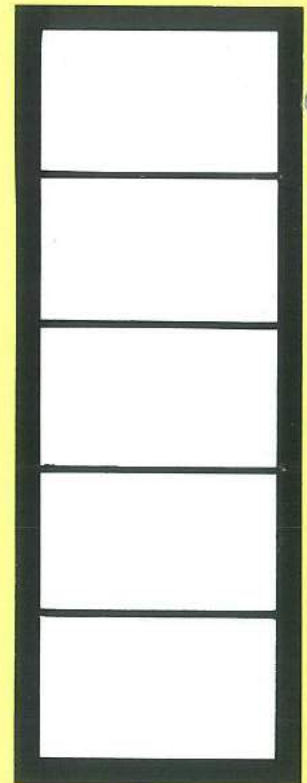

- PHOTOGRAPHIC EQUIPMENT
- AUDIO VISUAL EQUIPMENT
- SILVERWARE
- EDP MEDIA
(for access control:
where fire & humidity
protection is not required)
- OFFICE MACHINES
- TOOLS
- FIREARMS
- MEDICAL EQUIPMENT
& MICROSCOPES
- PHARMACEUTICALS
- COMPUTER COMPONENTS
- ANTIQUES
- COLLECTIONS
- BULK THEATER TICKETS

Our aim is to constantly improve our products; we therefore reserve the right to alter specifications without prior notice.

EMPIRE SECURITY SAFES:

These safes offer superior burglary protection than older castiron and newer fire resistant safes. Also, they provide large internal capacity while taking up a minimal amount of floor space.

DOOR: The door of the Empire Security Safe is constructed of a 3/8" thick solid steel plate that recesses into the body frame when closed. In addition a four-way, two inch square steel tubing is electrically welded to, and reinforces the door and boltwork against concentrated assaults. These combined features provide quality protection to resist attacks from sledge hammers, crowbars, wedges and other common burglary tools.

BODY: The uniquely designed body incorporates a single-shell construction of reinforced 1/4" solid steel that resists delamination attacks.

BOLTWORK / LOCKING MECHANISM: The numerous 5/8" diameter chrome plated locking bolts project into the reinforced boltwork chamber of the door. Each bolt operates independently; an attack on any one bolt will not affect the security of the other bolts in the system.

LOCKING MECHANISM: The locking system utilizes a Sargent & Greenleaf U.L. approved group II spy-proof combination lock for efficiency, security, & durability. The lock is key changeable and capable of 1,000,000 variations. Each lock is equipped with a special relocking trigger that secures the lock against direct attacks. The lock is mounted on a large 3/8" thick hardened steel plate providing additional drill and attack resistance.

RELOCKING MECHANISM: In addition to the combination lock's relocking trigger, the safe is equipped with an *independent* relocking mechanism. A concentrated assault on the combination lock will activate this device, further securing the boltwork mechanism in the locked position.

INTERIOR FITTINGS: Each safe is equipped to accept adjustable shelves for convenient storage of all items. The illustrations above detail the standard interior fittings for each model.

FINISH: All safes are attractively finished with a high quality metallic paint.

For additional security, all models can be prepared for anchoring.
