TRTL-30 Rectangular Door Money Safes

- The ultimate answer in safe protection
- Torch and tool attack resistant
- Insurance 'H' rated under Mercantile Safe Coverage
- Insurance 'G' rated for Bank and Broad Form policies
- U.L.[®] tested and listed
- Easy access doors

Unique tough design

Words cannot fully describe the exceptional strength and attack resistance of the newly designed Mosler TRTL-30 Money Safes. That's why we've used the simple name, "Material A-101" to describe the super tough molded composite which fills the steel door. By combining our high tensile SUPERGARD steel with MATERIAL A-101, we've achieved a major economic breakthrough in safe design technology. And to prove that quality is built in, we successfully passed the difficult Underwriters' Laboratories test for TRTL-30 safes with this design.

Body options

Two body construction options are offered with this new line. For most applications our standard TRTL body of reinforced concrete and Supergard steel will provide all the protection needed.

However, when the environment demands ultimate physical protection we offer the ultimate answer — the full A-101 body which we designate as FB — full bodied — construction. The FB body is 5¼ inches thick on all sides, and uses Material A-101 and Supergard Steel to effectively block physical attack with all types of hand tools or the oxyacetylene torch.

Locks and Relocks

The door is locked by four 1" diameter locking bolts and four deadbolts. The Mosler Group 1R lock is Underwriters' Laboratories listed and is both manipulation and radiological proof and contains an integral thermal relock. A UL listed mechanical relock device is activated if the lock is forcibly driven or punched. Both lock and relock are protected by a heavy hard plate of Mosler's Relsom II.

Automatic Interlock

A mechanical interlock prevents the locking bolts from being extended until the door has been closed past the point where damage to the bolts could occur.

Mosler interiors

Shelves and interior lockers may be easily installed in a wide variety of configurations. The Interior Module concept allows building lockers to fit your needs, with a range of optional locks and doors, or just plain cubicles in which to organize your valuables. Or, full width shelves can be used alone, or in combination with smaller secure storage lockers, or deposit lockers.

Timelocks

Mosler timelocks are reknowned for effective, efficient, reliable service.

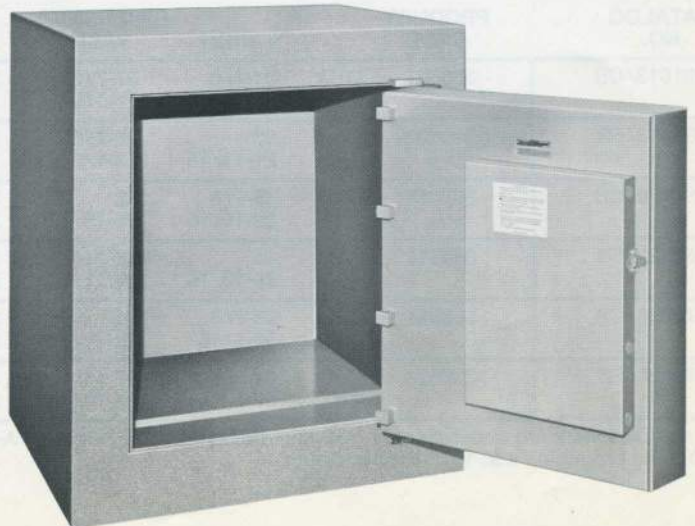

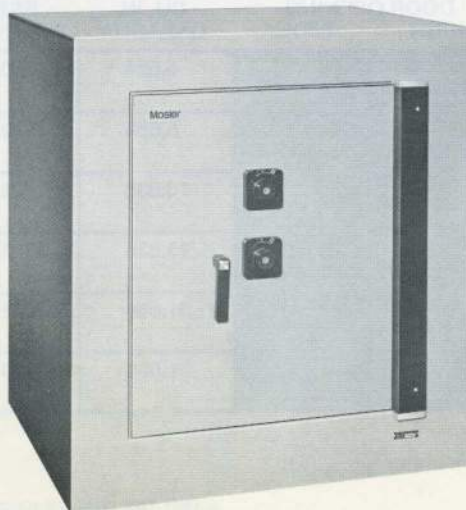

The two-movement Do-All II offers both long-term (up to 120 hours) delay and short-term (18 minutes) delay periods. It comes with combination lock or keylock, and several options on the short-term delay time, and permissible open period.

Also available are a three-movement Universal 1010 with 17 jeweled shock-proof movements, for outer safe door use and for inner compartments the single movement Defender I (without combination) and Defender II (with combination).

Mosler representatives are happy to recommend the right timelock for your application and risk conditions.

Material A-101[®]

Material A-101 is the result of decades of materials research and safe design experience. The exact composition is obviously proprietary, however, we can tell you it will wear the teeth off a hole saw, dissipate the heat of a torch, and effectively withstand any hand tool attack.

NOTE: All interior components available at extra cost.

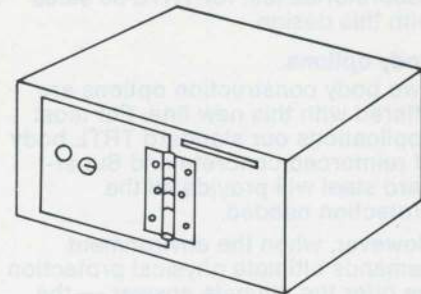

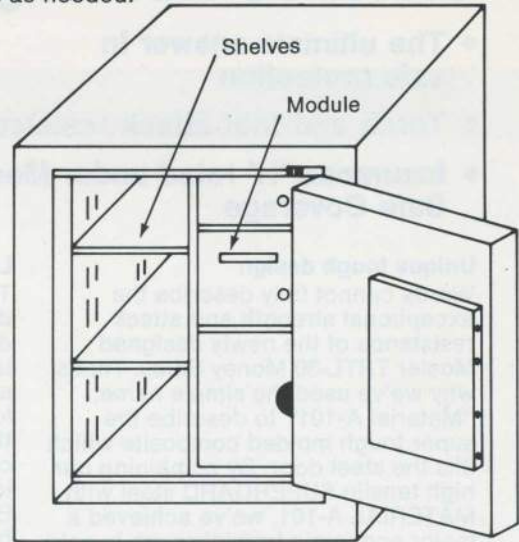

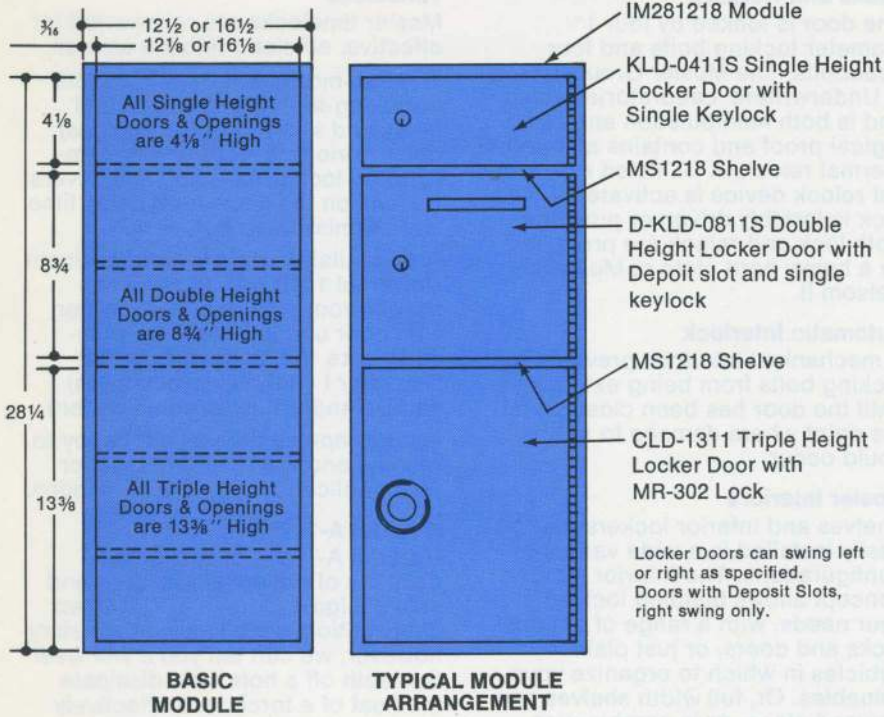

MODULES AND LOCKERS

Numerous combinations of shelf and locker space are available with the standard modules shown below. Use of the IM281218, IM281618, and MD281218 is limited to the larger 282420 and 572420 safes. The ER201612/IC may be used in the H201614 safe only.

When using the IM281218 and IM281618, the module can be equipped with open shelves, or upgraded to lockers through use of 3 sizes of locker doors as shown below. A deposit slot is available on the larger 2 sizes of locker doors. Various lock options available for the locker doors include: single or dual keylocks, Mosler Group 2 combination locks, and Mosler Defender timelocks with 7 or 15-minute delay.

OTHER OPTIONS

Heavy duty full width shelves spanning the full interior; filler shelves to go between the module and the safe wall; smaller safes, hoppers, and lockers to mount within these "H" rated safes; and the use of Mosler record safe interiors as needed.

ER201612/IC FOR USE INSIDE THE H201614
