U.L. TRTL30 X6 label

# TRTL 30 X6 Plus 1½ hour fire label

The name Tann has been associated with safe making longer than any other major contemporary safe maker. During the reign of King George II (1720-1760) the Tann family were making burglary resistant iron-bound treasure chests. The success of these early products led the security pioneer Edward Tann to found the world's first firm of safe makers - John Tann Limited, a name which has become synonymous with high quality security. Throughout the Company's history it has been essential to keep one step (at least) ahead of the burglar by incorporating advanced materials and design concepts in products.

John Tann Limited is an International Company operating from factories and offices in the USA, Canada, Denmark, Sweden and England and, with a worldwide network of representatives and consultants, can offer substantial support to international clients.

We proudly present a superior quality high security safe, the Tann TRTL30 X6 PLUS.

## GENERAL

This safe combines beauty with strength to withstand many forms of attack by today's sophisticated burglar, such as; attack by torch, heavy hand tools, high speed carbide tools, explosives and wedges. The Plus for the owner of a Tann X6 Plus is a 90 min. Swedish Fire Label, added to the U.L. TRTL30 X6 Label. Truly a safe for the future and an investment in peace of mind.

## STANDARD FEATURES

- U.L. TRTL30 X6 Label.
- Multi-Barrier Protection.
- 1½ hour Fire-Resistance Certificate.
- Original glass plate protection.
- Changeable keylock (acid resistant).
- Dual locks.
- Prepared for time lock.
- Random relockers.
- Riggers key combination.
- Thermal link.
- Concealed hinges and recessed door.

Plus more. Contact your importer and see how the Tann safe exceeds even the U.L. requirements for a TRTL30 X6 Label.

## CONSTRUCTION AND PROTECTION OF BODY AND DOOR

### Door

The total door thickness is 7 5/8", with a massive multi-barrier protective thickness of 5 1/4".

### Body

The protective body thickness (sides, top, bottom and back) is made up of a massive 5 5/8" of multi-barrier materials. The Tann philosophy of protection in depth, using multi-barrier materials, means that our TRTL30 X6 safe, offers substantial protection against attack by torch, drills, hand tools and explosives. This multi-layer protection means a potential attacker is forced to change equipment several times during an attack. Look at what we offer with Multi-Barrier Protection in the construction of the Tann TRTL30 X6:

- Copper - A specific barrier against attack by torch (oxy. arc).
- Tann Alloy II - A substantial barrier against attack by torch and drills.
- Adamantium - A potent barrier against attack by drills, hand tools and explosives.

Remember the Tann TRTL 30 X6 offers you protection in depth.

### Locking Mechanism and Boltwork

Standard locking - one 'group one' manipulation proof combination lock and one 9-lever high security double-bitted changeable (customer changeable) acid-resistant keylock. Keys supplied in triplicate. The combination lock is fitted with a spy-proof dial and dial check-lock.

The Tann TRTL30 X6 Plus is equipped with a powerful 4-way sliding bolt system, complete with random relocking and cross-locking devices, within a massive recessed door. Unique to the safe making industry, this door provides ultimate strength against concentrated attacks - wedging, explosives and all other forms of attack known today.

### Hold-up Deterrent Features

For additional locking protection, each door is prepared to accept a 144-hour two or three movement S & G or LaGard time lock. A specially-prepared concealed access for hidden alarm wiring is standard.

### Furniture and Fixtures

A chrome capstan pull handle and aluminium-finish fascia plate accent the attractive neutral beige finish. All models feature fully adjustable shelves; some models are equipped with locking jewellers cupboard. Size 3520 supplied as standard with 2 shelves. Sizes 4720 and 5920 supplied as standard with 3 shelves and cupboard. Sizes 7026 and 7036 supplied as standard with 5 shelves and cupboard.

**Building safes for three centuries**

John Tann has these U.L. labels: ULTL15, ULTL30, ULTRTL30, ULTRTL15 X6, ULTRTL30 X6

Tann's policy is to always provide the best in security. We reserve the right to incorporate any improvement and amend any specification without prior notice.
